### **Standard Abstract**

(written in Arial, 11, single spacing, not more than 1 page)

This study aims to identify the level of digital technology usage in English language teaching and to explore the challenges and strategies of primary school teachers in integrating technology during the teaching and learning (T&L) process. This study employed a quantitative approach using a survey design. A total of 120 primary school English teachers in the Kuching district were selected using simple random sampling. Data were collected through a questionnaire consisting of four main sections, namely respondent demographics, level of technology usage, challenges in technology integration, and strategies for implementing digital T&L. The research instrument was validated by three field experts and achieved a Cronbach Alpha reliability value of 0.89. Data were analysed using descriptive statistics, namely mean, standard deviation, and percentage, as well as inferential statistics including t-test and ANOVA using SPSS version 27 software. The findings revealed that the level of digital technology usage in English language T&L was high (mean = 4.12). However, teachers still faced several challenges such as internet facility constraints, time required for preparing digital materials, and students' technology skill levels. The study also found that the use of interactive applications and continuous professional training helped to improve the effectiveness of technology integration in T&L. The implications of the study indicate that schools and the Ministry of Education Malaysia need to strengthen infrastructure support and digital training for teachers to ensure more effective implementation of digital education.

**Keywords:** digital technology, English language teaching, primary school teachers, technology integration, T&L

**Note: Essential Elements in a Standard Abstract**

- Background / research issue – What is the problem or focus of the study?
- Purpose / research objectives – What does the study aim to investigate?
- Research methodology – Approach, design, sample, and instruments.
- Data analysis – Methods of data analysis used.
- Research findings – Main results of the study.
- Implications / recommendations – Importance or contributions of the study.
- Keywords – 3 to 5 keywords related to the study.

**Characteristics of a Good Standard Abstract**

1. The abstract is usually between 150 to 300 words.
2. Written in a single complete paragraph.
3. Does not contain references, tables, or figures.
4. Uses formal and academic language.
5. Sentences are concise, clear and easy to understand.
